TD GLOBAL CLEARING & LOGISTICS

Staff guide

How to add a client, connect them to Telegram, create a request and keep them updated. Updates currently go out on Telegram only.

For staff: five steps

Website for now: website-d3b60c6c.cpi.dmr.mybluehost.me. It changes when the company domain is ready.

1 Sign in

Open the website and choose **Staff login** in the top menu, or go straight to the staff sign-in page. Enter your username and password.

- First time: sign in with the temporary password you were given, then choose your own (at least 10 characters).
- Forgot it? Ask a super admin to reset it under **Team**.

2 Add the client

Go to **Clients** and fill in **name**, **company** (optional), **email** and **phone** (for example `17975757`). Click **Register client**.

> Untick “Email the client a welcome message”. Email is not switched on yet, so it would only show as failed.

3 Give the client their Telegram link

In the client list, under the client’s name, click **Create Telegram link**. A link and a QR code appear.

- **Client is with you:** let them scan the QR code with their phone camera.
- **Client is away:** click **Copy link** and send it on WhatsApp or SMS.

When the client opens it and presses **Start**, the list shows **Telegram: connected**.

> The link works once, expires after 48 hours and belongs to that client only. If it fails, create a new one.

4 Create the request

Go to New request. Choose the client, import or export, the shipping method, and describe the goods (for example “2 pallets of auto parts”). Click **Create request and tracking number**.

- The tracking number (like `TD-2610-K7QX4M`) is sent to the client on Telegram automatically.
- The goods text appears in their messages, so write it clearly.
- Client not on Telegram? Read the number out by phone or WhatsApp.

5 Update the stage

Go to Shipments, click the tracking number, and under **Update stage** choose the new stage. Keep **Notify the client** ticked, then click **Save update**.

Request received · Documents pending · Documents checked · Declaration lodged · Duties to pay · Cleared · Delivered · On hold

- Use **On hold** when we need something from the client.
- A **note** is optional. Anyone with the tracking number can read it, so never write personal or financial details.
- Check the **Notifications** list on the same page. It says Sent, or Failed with the reason.

What the client does

Share these steps with clients. No account or password is needed.

1 Get the link

Staff give you a link or a QR code, on the spot or on WhatsApp. You need the free Telegram app on your phone.

2 Connect

Scan the QR code or tap the link. Telegram opens a chat with our bot. Press **Start**. The bot replies that you are connected.

3 Receive updates

Each time your shipment moves to a new stage, the bot sends a message:

EXAMPLE MESSAGE

Update on your tracking number TD-2610-K7QX4M

Shipment: Import · Road freight · 2 pallets of auto parts

Hello Tashi. New stage: **Declaration lodged**
Your declaration has been lodged with customs.

Open your shipment

TD Global Clearing & Logistics Pte. Ltd.

4 Check any time

`/status` Type this to the bot to see your latest shipments.

`/stop` Type this to stop updates.

Or open the website, choose **Track shipment**, and enter your tracking number. No sign-in.

Lost your tracking number? On the Track page, open “Lost your tracking number?” and enter your phone or email. The number is sent to the contact details we hold. If you are not on Telegram, staff can give you the number by phone and you can still use the Track page.

Email updates are not switched on yet. Telegram and the Track page are the only ways clients are updated for now.
